
- Dual interface information payment display card
- Dual OTP, total expenses, account balance and transaction history functionalities
- Leverages existing EMV infrastructure.

La Chaux-de-Fonds, Switzerland – November 15, 2011 – NagraID Security, a Kudelski Group (SIX:KUD.S) company, today introduced the second generation MasterCard Information Display Card, the most advanced payment display card yet, at Cartes & Identification 2011 in Paris. The card features a dual interface that enables contact and contactless communication, dual one-time password (OTP) capability, on card access to total expenses, account balance and previous transactions history by using existing standard EMV infrastructure.

The new MasterCard Information Display Card manufactured by NagraID Security is the world’s most advanced payment display card, with groundbreaking features including dual interface, dual OTP, total expenses, account balance and transactions history. The dual interface enables both contact and contactless communication with the display circuit. Dual OTP enables generation of two different passcodes on a single device to protect two different services such as E-Banking and E-Commerce. On card access to vital account related information such as balance, total expenses and transactions history allows cardholders to maintain control. From its familiar credit card form factor, its standard payment functionalities including PayPass, to the use of standard EMV infrastructure, this card has been designed for rapid user adoption, maximum usability and seamless deployment.

“The information display card combines advanced technology with ease of use in a familiar payment card,” said Philippe Guillaud, EVP and CTO of NagraID Security. “Our Innovation Team strives to develop technology that brings security to the next level, without compromising usability and convenience”.

By obtaining MasterCard’s stringent CSI (Card Structure & Integrity) certification for it’s display cards, NagraID Security proves once more its dedication to deliver the most innovative products of the highest quality. The new information display is immediately available for commercial rollouts.
